Davies and Jeffrey McDermott, combines CDNAs from CC-1690
cells grown to mid-log phase in TAP (NH4+ - containing)
and shifted to TAP - NO3- (24hrs); H2 production
conditions (0, 12hr, 24hr) see Melis et al., (2000) Plant
Phys. 122: 127-135; TAP + H2O2 (1, 12, 24 hr); TAP +
sorbitol (1, 2, 6, 24 hr); TAP + Cd (1, 2, 6, 24 hr).
PolyA mRNA was purified from each sample, pooled and cDNA
synthesized. The cDNA was directionally cloned into lambda
synthesized. The cDNA was directionally cloned to lambda
synthesized. The cDNA was directionally cloned into lambda
synthesized. The BCORI (5') and XhoRI (3')
sites. pBluescript II SK- plasmids were excised from the
lambda ZAP clones by superinfection with ExAssist
(Stratagene) phage. The library was normalized using
method 4 described in Bonaldo et al., (1996) Genome
Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    95

oeh49c05.g1 B.oleracea002 Brassica oleracea genomic, genomic survey

Whole genome shotgun reads from Brassica oleracea Unpublished

/clone lib="B.oleracea002"
/note="Vector: pOTw013; Whole genome shotgun library from flowering buds. DNA was purified from a crude nuclear prep using Brassica oleracea TO1000H3 buds provided by Thosmas Osborn at the University of Wisconsin. Genomic DNA was provided by Pablo Rabinowicz (CSHL) and the shotgun library prepared at Washington University Genome Sequencing Center."

Patent No. 6361986

GENERAL INFORMATION:

APPLICANT: Degussa-H1s AG

APPLICANT: Porschungszentrum-J1ich GmbH

TITLS OF INVENTION: PROCESS FOR THE PREPARATION OF L-AMINO ACIDS BY FERMENTATION IN CURRENT APPLICATION NUMBER: US/09/362,899

CURRENT FILING DATE: 1999-07-29

EARLIER APPLICATION NUMBER: DE 19924365.4

EARLIER FILING DATE: 1999-05-27

NUMBER OF SEQ ID NOS: 3

SOFTWARE: Patentin Ver. 2.1
